

Small-scale Tilapia Hatchery

THE TILAPIA HATCHERY EXPERTS

*Being the prime tilapia hatchery within Europe, Til-Aqua International is receiving many enquiries from small-scale producers and institutes for high quality tilapia fry and fingerlings. However, the limited number of fish per order often causes additional costs to be relatively high for each transport again (f.i. transport and documentation). To support also these facilities, Til-Aqua International has developed the **Small-scale Tilapia Hatchery**.*

1. **Obtain YY Broodstock and the hatchery system..**
2. **..manage your own production..**
3. **..and meet your needs!**

*The small-scale hatchery is fit to produce **all-male (NMT) fingerlings** up to 0.2 grams each. The small **air-driven** components that make up the hatchery system can easily be picked up or shipped. To become optimally prepared, the vast experience within Til-Aqua is shared through **training** and **support**.*

Increased flexibility

The ability to plan the production, increases flexibility in both timing and quantities

Decreased additional costs

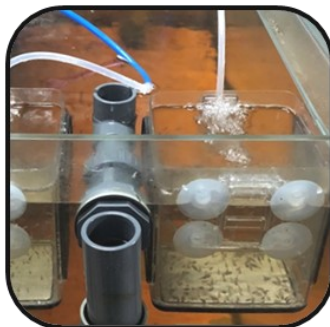

With only one shipment per year, transport and documentation costs are minimized

What you require.., and more!

Potential production higher than required? Distribute surplus production to fellow farmers!

BE INDEPENDENT → BE IN CHARGE!

Let us know the number of fry you would require per week, month or year and receive a tailor-made quotation!
